### **About XCMG**

As a 100 billion-level leading company renowned for the largest scale, the most advanced technology, the largest export volume, and the highest competitiveness and influence in China's construction machinery industry, Xuzhou Construction Machinery Group Co., Ltd. (XCMG) not only has dominated the Chinese market for decades, but also is committed to expanding its worldwide presence as the third largest supplier in this field and 395th of Global 500.

The product portfolio offered by XCMG covers 16 categories such as hoisting machinery, excavation machinery, concrete machinery, mining machinery, earthmoving machinery, and road construction machinery, as well as three key components, i.e., hydraulic systems, transmission systems and electrical control systems. In these areas, our hoisting machinery ranks first in the world, and our complete solutions for road construction and maintenance machinery, piling machinery and concrete machinery also take the leading position in global rankings.

XCMG has been granted more than 8,000 patents in total, including more than 1,900 invention patents and more than 130 international PCT patents.

We have established our own R&D centers, manufacturing plants or KD factories in more than 10 countries, e.g., Germany, USA, Brazil and India, and have acquired 3 European companies including Schwing from Germany.

The manufacturing factory in Brazilian, which is built on a barren land with an investment of USD 350 million, has become a successful model of China-Brazil economic cooperation. At present, our products are exported to 187 countries and regions, covering 97% of the countries along the "Belt and Road". XCMG takes the largest share of the business exported to 35 countries, with the annual export volume and overseas revenue remaining in first place and outperforming all other competitors in China.

### **Description & Features**

### Description & Features

- XC7-SR10 is a new generation of XC7 series skid steer loaders developed by XCMG based on the design concept of seeking continuous innovation, developing leading-edge technology, making durable handicrafts, and constantly looking for better and more effective methods to improve work efficiency.
- ▼ The radial lifting mechanism independently designed by XCMG features higher lifting capacity and one-way leveling function, which is able to ensure higher operation efficiency.
- The panoramic cab is configured with FOPS and ROPS devices as standard to ensure higher safety and reliability.
- The spaceship-style cockpit features the electronic real-time monitoring system with intelligent advanced screen, which combines the design and performance perfectly, and improves the level of intelligence and comfort significantly.
- Switchover to high-flow mode with one button, enabling easy coupling of heavy-duty tools such as planer and disc saw to meet the needs for wider range of applications.

- Drivetrain system: well-known brand engine with excellent power performance and environmen tal-friendly emission certified according to China III requirements; maintenance-free sprocket box designed with long wheelbase and adapted to various ultra-heavy-duty operating conditions, featuring incomparable stability.
- Hydraulic system: key components from world-class brands, supporting boom lifting and leveling operations, as well as stepless speed regulation and intelligent control of coupled tools. Locking, centralized pressure measurement and parking brake functions; ensuring fast and efficient transfer with a driving speed up to 14km/h, surpassing competitors in the industry.
- Operating unit: Radial lifting mechanism independently designed by XCMG, featuring higher lifting capacity, universal quick couplings enabling easy change of various operating units to meet differ ent operating requirements.
- Electric control system: electro-hydraulic control, higher safety with electric control interlock (inter-lock override).

### Common special tools

#### Product reliability:

- Warm-up idle speed: able to reach the operating temperature more quickly by increasing the engine idle speed slightly after the vehicle is started in the cold state.
- Engine monitoring and alarm: monitoring the coolant temperature, engine oil pressure, hydraulic oil temperature, etc.; producing an alarm and displaying the fault code in case the measured data exceeds the set value.
- Overload protection: able to limit the output torque and speed of the engine in case of overload for a prolonged duration, in order to prevent overheating and damage, minimize wear and avoid further failures.
- The welded sprocket box is integrated with the frame, featuring high structural strength, easy disassembly/assembly, and zero maintenance.
- High-strength roller bearings can withstand large radial and axial loads, and guarantee better performance under vibration and impact load conditions.

#### Comfort design:

- The super-large luxurious cab is integrated with XCMG family-style design and C-type appearance, featuring spacious room and wide field of view.
- The air conditioner features excellent performance due to optimized internal air duct, balanced flow field and stable temperature control, and is configured with eight air outlets and supports glass defrosting and foot warming functions.
- The machine is equipped with hydraulic pilot + hydraulic control & multi-functional electric control to improve operating comfort.
- The mechanical suspension seat, featuring anti-vibration performance according to the EM9 standard, can be adjusted at different angles according to the comfort of the human body, and is configured with a 2" wide seat belt as standard.

#### Maintainability:

- The cab can be tipped over at a large angle, and the rear and upper hoods can be rotated to open. The quickly-detachable side panels and foot compartment enable convenient repair and maintenance of vehicle components.
- Cockpit maintainability: All electrical components (battery, fuses and switches), filter and oil drain port are easily accessible.
- The combined pressure testing connector can quickly test the pressure of the hydraulic system, and efficiently analyze and eliminate system faults.
